INDN311 Assignment 3

Gabrielle Sladek

Why buy a soap bottle made of soap?

“Sustainability is made easy with the zero waste, zero compromise hand soap bottle made entirely of recycled soap. Have liquid hand soap inside of the bottle and use the bottle itself once the liquid is gone. This product is perfect for a modern, simplistic, or minimalist household. This gentle soap can be used by anyone and is great for sensitive skin. Compostable packaging is also included for guilt-free, worry-free disposal. Make the switch today and join us in our mission to create a greener, cleaner world, one wash at a time.”

- Gabrielle Sladek (me)

Initial Design Process

Natural ingredients and scents to stay in touch with that natural vibe.

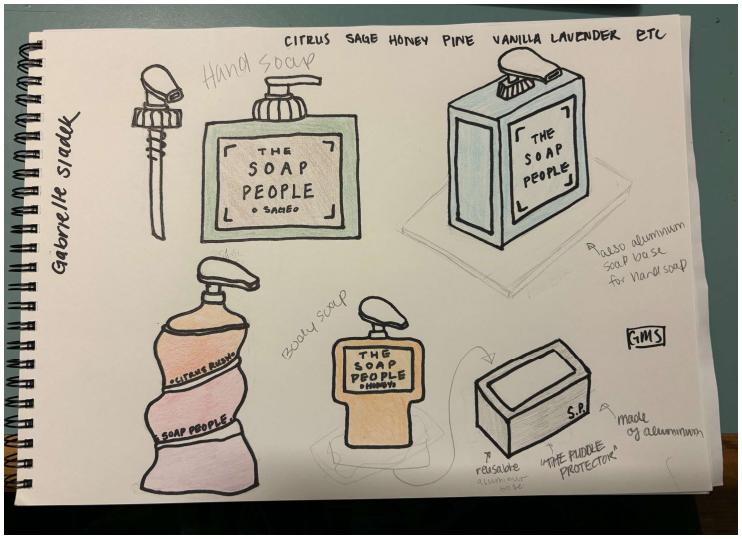

Buy dispenser top once, and never again. Completely reusable design screws onto each new bottle, so there is no waste.

The design uses recycled hotel soaps to reduce waste worldwide.

Trendy, simplistic aesthetic perfect for a zero-waste lifestyle.

Is easy to use as a bar when finished with the soap in the bottle.

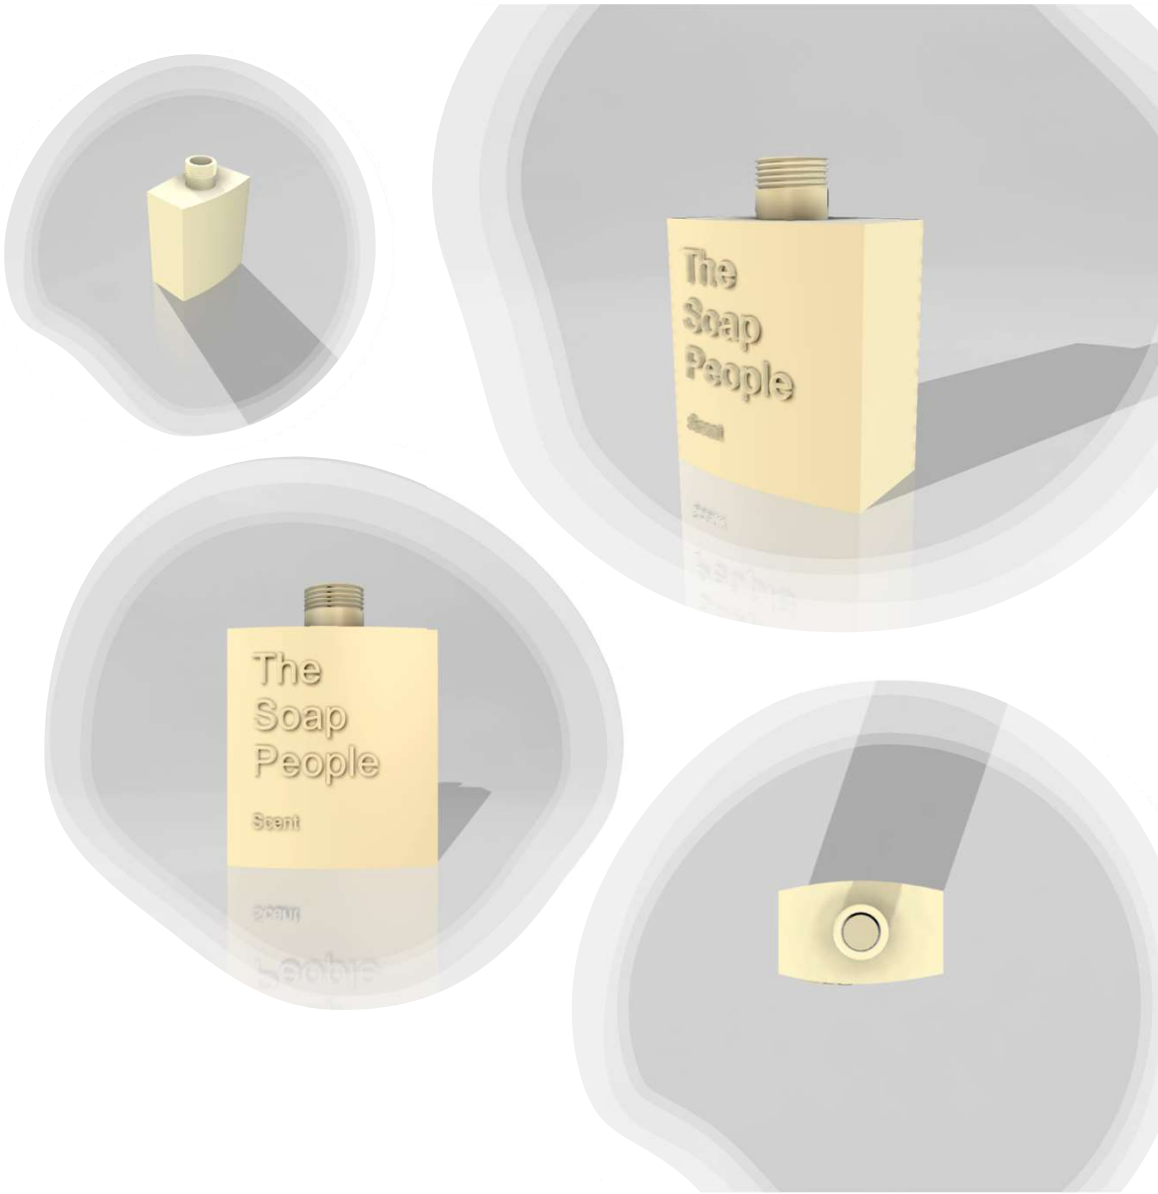

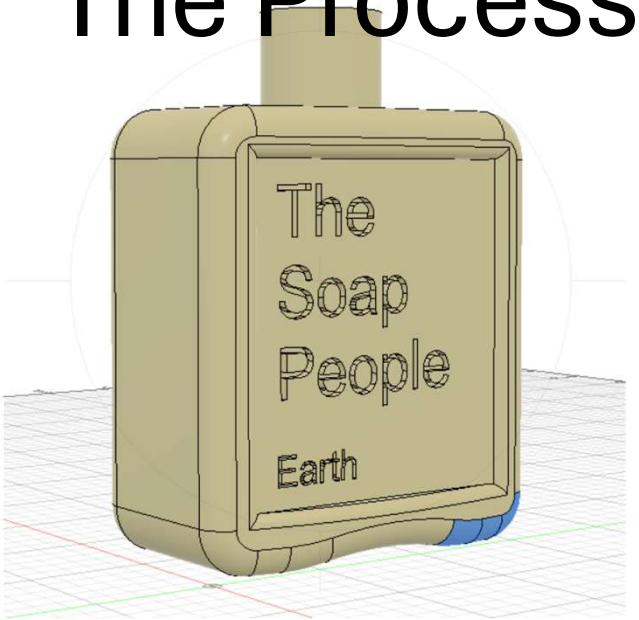

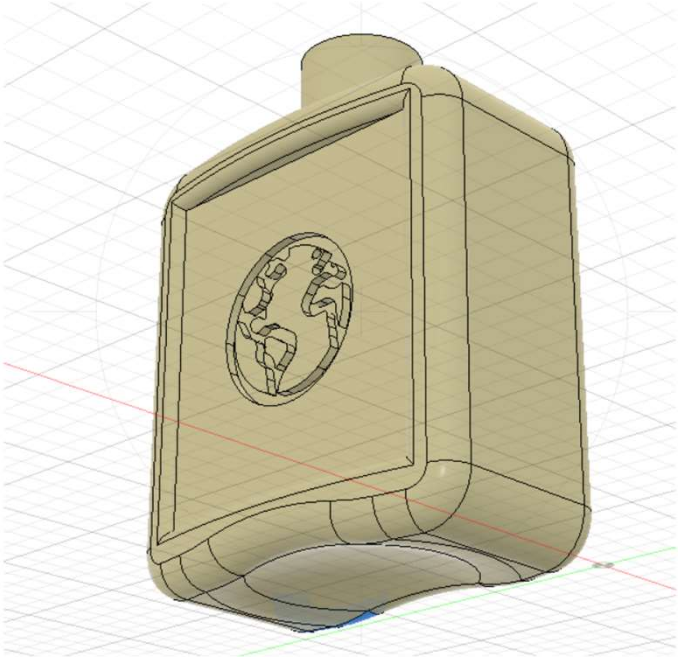

Where we left off in Assignment 2 ...

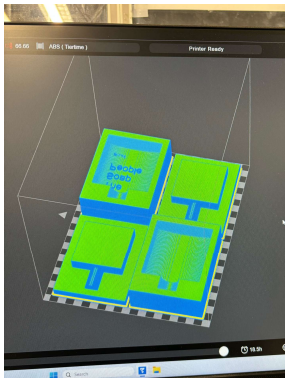

- Convex shape adds more interesting aesthetics while remaining simplistic
- Shape is optimal for the rounding of the average hand
- Text embossing remains the same for consistent branding
- Zero waste/compostable packaging is also provided

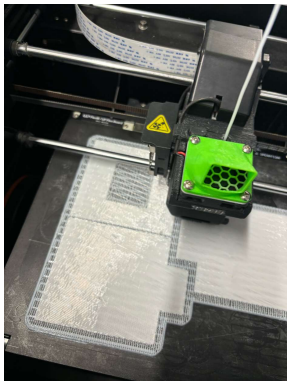

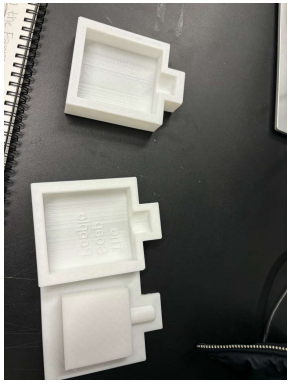

The Process

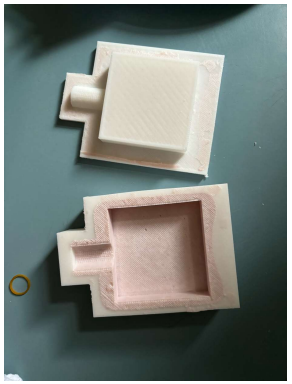

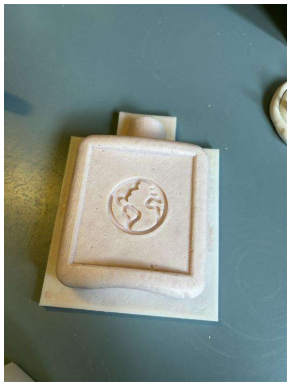

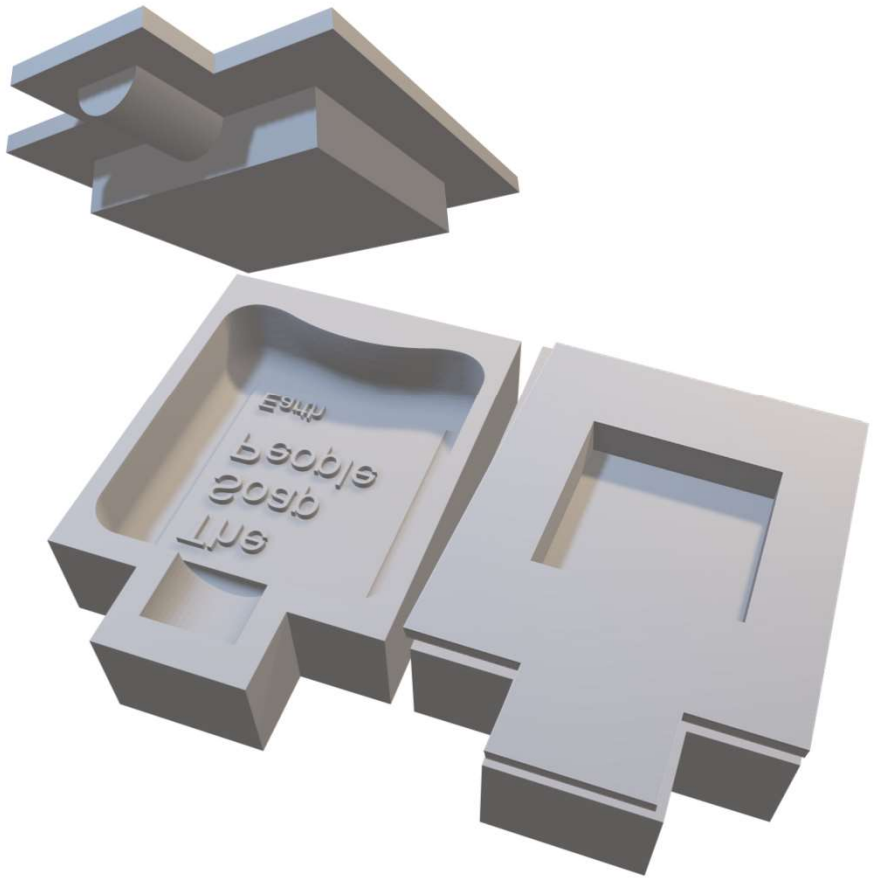

Where we left off on Wednesday:

The Final Product... For Now ☺

What have I learned?

- Making soap is harder than it looks
- It is important to step outside of your comfort zone sometimes to create something great
- I learned how to 3D print and make a mold
- Always consider the necessary tools before starting your project
- You never know if something is fun unless you try it
- You never know if something will work unless you try it
- It is important to keep a journal of your progress

Where do I hope to go in the future with this?

- In the future, I would be interested in continuing this soap bottle journey
- Based on how my final product turned out, in the future I would use a stovetop to melt my soap
- I would add soap base to create a richer consistency
- I would create the embossing using a stamp made of metal so it could be easily heated up and pressed into the soap as a logo
- I hope to receive funding from my university in the states to continue my journey in creating a more sustainable lifestyle

Thank you for a fun trimester, and for giving me the opportunity to learn in a supportive environment. New Zealand has truly given me a new outlook on life, as well as an unforgettable experience. Thanks again,

-Gabby Sladek
